**Our Solution to Cutting, Shaving and Rasping EPS Foam with One Rasp**

All the Features of the DuraRasp, Plus...

Rasping

The same unequalled rasping quality as the original DuraRasp, but now better.

Cut-Off Saw

Use the "Claw" to eliminate excess EPS on corners.

Shaves High Spots

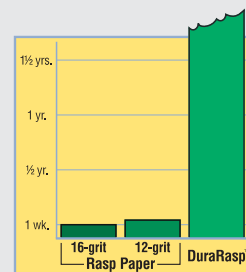

Now, remove those high spots even faster by shaving with the Claw!

## The Industry Standard for Rasping EPS

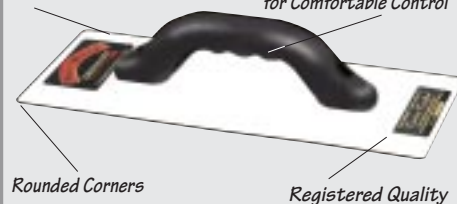

**Outlasts Rasp Paper Over 100 to 1**

In ten months of testing by professional contractors, paper can't begin to compare with the dramatic performance of the DuraRasp! 12-grit proved to be only marginally better than 16-grit, but still no comparison to the DuraRasp.

## VLF Frame Anchor

- Door & Window Frames
- Bathroom Fixtures
- General Purpose
- Curtain Rods
- Hand Rails

Anchor Size	Load Value
6/70	66 lbs
8/80 - 8/135	102 lbs
10/100 - 10/160	120 lbs

**Load Values:** Suggested load values for VLF Anchors reflect tensile strength in AAC - 5.0 (P4). All suggested load values have been reduced by a security factor of five.

## Push-through Application, Fast, Pre-Assembled, with Metal Tip

**Description:** A highly effective anchoring system for a wide variety of applications. This anchor is composed of a polyethylene expansion body formed around a hardened steel shaft and capped by a metal tip. This anchor forms a knot deep within the AAC. Can be hammered into position without pre-drilling. Available with either flat or hex head.

**Applications:** Door & Window Frames, Bathroom Fixtures, Curtain Rods, Hand Rails and as a General Purpose Fastener where speed of installation is important.

**Installation:** The anchor is passed through the object to be anchored and hammered into the AAC, then tightened until significant resistance is felt. In P6 or greater AAC pre-drilling is suggested. A small line on the anchor indicates minimum embedment.

## GB Anchor

- Bathroom Fixtures
- Water Pipes
- Floor Posts
- Hand Rails
- Cabinetry
- HVAC

Anchor Size	Load Value
10/55	132 lbs
12/60	187 lbs
14/75	253 lbs

**Load Values:** Suggested load values for GB Anchors reflect tensile strength in AAC - 5.0 (P4). All suggested load values have been reduced by a security factor of five.

## Flush Mount, Nylon, Triangular, Extremely Strong, and Vibration Resistant

**Description:** The anchor is divided into three parts and compacts AAC over a relatively wide area resulting in an extremely strong and vibration resistant connection. Made of nylon this unique triangular shaped anchor locks its exterior ridges into the compressed wall of the drilled hole.

**Applications:** For flush applications (as opposed to "push through"). Suitable for a wide variety of uses such as attachment of Bathroom Fixtures, Cabinetry, Handrails, Floor Posts, Water Pipes, and HVAC Systems.

**Installation:** The anchor is is hammered into a pre-drilled or "pressed" hole until flush with the AAC surface. The insertion process begins the compaction of the AAC in the area surrounding the hole. As the screw is tightened, expansion of the anchor continues until the screw passes through its end. The screw cuts its own threads as it enters the anchor and can not be stripped out or over torqued during the installation process.

## Rule of Thumb —

To calculate the square footage of coatings per gallon:

1 mil thickness of liquid will theoretically cover 1604 square feet. (If you need 5 mils thick — 5 divided into 1604 would be 320 sq. ft.)

## Typical Coating Projects

### Specialty Coatings
